

GenMAPP Gene Database for *Arabidopsis thaliana*
 At-Std_External_2009610.gdb
ReadMe

Last revised: 6/11/09

This document contains the following:

1. Overview of GenMAPP application and accessory programs
2. System Requirements and Compatibility
3. Installation Instructions
4. Gene Database Specifications
 - a. Gene ID Systems
 - b. Species
 - c. Data Sources and Versions
 - d. Database Report
5. Contact Information for support, bug reports, feature requests
6. Release notes
 - a. Current version: At-Std_External_2009610.gdb
7. Database Schema Diagram

1. Overview of the GenMAPP application and accessory programs

GenMAPP (Gene Map Annotator and Pathway Profiler) is a free computer application for viewing and analyzing DNA microarray and other genomic and proteomic data on biological pathways. MAPPFinder is an accessory program that works with GenMAPP and Gene Ontology to identify global biological trends in gene expression data. The GenMAPP Gene Database (file with the extension *.gdb*) is used to relate gene IDs on MAPPs (*.mapp*, representations of pathways and other functional groupings of genes) to data in Expression Datasets (*.gex*, DNA microarray or other high-throughput data). GenMAPP is a stand-alone application that requires the Gene Database, MAPPs, and Expression Dataset files to be stored on the user's computer. GenMAPP and its accessory programs and files may be downloaded from <<http://www.GenMAPP.org>>. GenMAPP requires a separate Gene Database for each species. This ReadMe describes a Gene Database for *Arabidopsis thaliana* that was built by the Loyola Marymount University (LMU) Bioinformatics Group using the program GenMAPP Builder 2.0, part of the open source XMLPipeDB project <<http://xmlpipedb.cs.lmu.edu/>>.

2. System Requirements and Compatibility:

- This Gene Database is compatible with GenMAPP 2.0 and 2.1 and MAPPFinder 2.0. These programs can be downloaded from <<http://www.genmapp.org>>.
- System Requirements for GenMAPP 2.0/2.1 and MAPPFinder 2.0:
 Operating System: Windows 98 or higher, Windows NT 4.0 or higher (2000, XP, etc)
 Monitor Resolution: 800 X 600 screen or greater (SVGA)
 Internet Browser: Microsoft Internet Explorer 5.0 or later
 Minimum hardware configuration:
 Memory: 128 MB (512 MB or more recommended)
 Processor: Pentium III
 Disk Space: 300 MB disk (more recommended if multiple databases will be used)

3. Installation Instructions

- Extract the zipped archive and place the file “At-Std_External_2009610.gdb” in the folder you use to store Gene Databases for GenMAPP. If you accept the default folder during the GenMAPP installation process, this folder will be C:\GenMAPP 2 Data\Gene Databases.
- To use the Gene Database, launch GenMAPP and go to the menu item *Data > Choose Gene Database*. Alternatively, you can launch MAPPFinder and go to the menu item *File > Choose Gene Database*.

4. Gene Database Specifications

a. Gene ID Systems

This *Arabidopsis thaliana* Gene Database is UniProt-centric in that the main data source (primary ID System) for gene IDs and annotation is the UniProt complete proteome set for *Arabidopsis thaliana*, made available as an XML download by the Integr8 resource. In addition to UniProt IDs, this database provides the following proper gene ID systems that were cross-referenced by the UniProt data: TAIR, GeneId (NCBI), UniGene, and RefSeq (protein IDs of the form NP_##### and NP_#####). It also supplies UniProt-derived annotation links from the following systems: EMBL, InterPro, PDB, and Pfam. The Gene Ontology data has been acquired directly from the Gene Ontology Project. The GOA project was used to link Gene Ontology terms to UniProt IDs. Links to data sources are listed in the section below.

Proper ID System	SystemCode
UniProt	S
GeneId	L
RefSeq	Q
TAIR	A
UniGene	U

b. Species

This Gene Database is based on the UniProt proteome set for *Arabidopsis thaliana* (cultivar Columbia), taxon ID 3702.

c. Data Sources and Versions

- This *Arabidopsis thaliana* Gene Database was built on June 10, 2009; this build date reflected in the filename At-Std_External_2009610.gdb. All date fields internal to the Gene Database (and not usually seen by regular GenMAPP users) have been filled with this build date.
- UniProt complete proteome set for *Arabidopsis thaliana*, made available as an XML download by the Integr8 resource:
<<http://www.ebi.ac.uk/integr8/FtpSearch.do?orgProteomeId=3>>
Filename: “3.A_thaliana.xml” (downloaded as a compressed .gz file and extracted)
Version information for the proteome sets can be found at
<<http://www.ebi.ac.uk/integr8/FtpSearch.do?orgProteomeId=493>>
The proteome set used for this version of the *Arabidopsis thaliana* Gene Database was based on Integr8 (release 95) that was built from UniProt release 15.2 and InterPro release 19.0 and was released on May 11, 2009
- Gene Ontology gene associations are provided by the GOA project:
<<http://www.ebi.ac.uk/GOA/>> as a tab-delimited text file. The *Arabidopsis thaliana* GOA file was accessed from the Integr8 proteome set download page:
<<http://www.ebi.ac.uk/integr8/FtpSearch.do?orgProteomeId=18>>
Filename: “3.A_thaliana.goa”. The GOA file for this version of the *Arabidopsis thaliana* Gene Database was based on the GOA Proteome Sets 49.0 released on May 26, 2009.
- Gene Ontology data is downloaded from
<<http://www.geneontology.org/GO.downloads.ontology.shtml>>
Data is released daily. For this version of the *Arabidopsis thaliana* Gene Database we used

the January 23, 2009 release.
Filename: "go_daily-termdb.obo-xml.gz".

d. Database Report

- UniProt is the primary ID system for the *Arabidopsis thaliana* Gene Database. The UniProt table contains all 35789 UniProt IDs contained in the UniProt proteome set for this species. The TAIR IDs and other ID systems were derived from the cross-references in the UniProt proteome set.
- The following table lists the numbers of gene IDs found in each gene ID system:

ID System	ID Count
EMBL	45341
GeneId (NCBI)	22555
GeneOntology	8690
InterPro	4986
PDB	355
Pfam	2971
RefSeq	26771
TAIR	27235
UniGene	23526
UniProt	35789

5. Contact Information for support, bug reports, feature requests

- The Gene Database for *Arabidopsis thaliana* was built by the Loyola Marymount University (LMU) Bioinformatics Group using the program GenMAPP Builder, part of the open source XMLPipeDB project <<http://xmlpipedb.cs.lmu.edu/>>.
- For support, bug reports, or feature requests relating to XMLPipeDB or GenMAPP Builder, please consult the XMLPipeDB Manual found at <<http://xmlpipedb.cs.lmu.edu/documentation.shtml>> or go to our SourceForge site <<http://sourceforge.net/projects/xmlpipedb/>>.
- For issues related to the *Arabidopsis thaliana* Gene Database, please contact:
Kam D. Dahlquist, PhD.
Department of Biology
Loyola Marymount University
1 LMU Drive, MS 8220
Los Angeles, CA 90045-2659
kdahlquist@lmu.edu
- For issues related to GenMAPP 2.0/2.1 or MAPPFinder 2.0 please contact GenMAPP support directly by e-mailing genmapp@gladstone.ucsf.edu or GenMAPP@googlegroups.com.

6. Release Notes

a. Current version: At-Std_External_2009610.gdb

- This release is the first release of a standard *Arabidopsis thaliana* Gene Database
